
Booting into Safe Mode

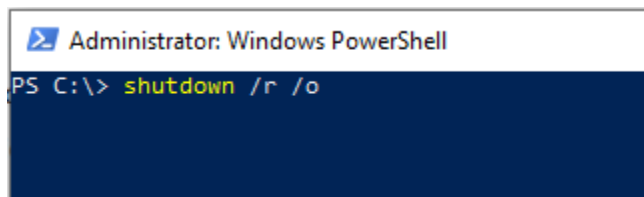

1. Click the Start menu and type **System Configuration**.
2. Select System Configuration from the results.
3. Select the Boot tab.
4. Select Safe Boot.
5. Click OK.
6. When prompted to Restart or Exit without Restart, select Restart.
7. Note which services and devices are available upon booting into Safe Mode.

Your operating system will not reboot into Safe Mode. You can exit Safe Mode by clicking the Start menu and selecting Reboot. If the operating system reboots back into Safe Mode or you do not want it to reboot into Safe Mode, you can enter the command `bcdedit /Deletevalue {current} SAFEBOOT`. This will remove the entry in the BCD that notifies the operating system to boot into Safe Mode.

In windows 10

Run CMD -> shutdown /r /o

Cmd

A screenshot of a Windows PowerShell window titled "Administrator: Windows PowerShell". The command prompt shows the command `PS C:\> shutdown /r /o` entered in yellow text on a dark blue background.

```
Administrator: Windows PowerShell
PS C:\> shutdown /r /o
```
